

Git asks for username every time I push

Whenever I try to push into my repo git asks for both `username` & `password` .

I have no problem in re-entering my password each time but the problem is in entering username. I use `https` to clone my repository.

So, how can I configure git so that it doesn't asks for `username` on each `git push` .

I am new to linux but IIRC in windows `git push` only asks for password.

linux

git

github
